

React Context | Part 4 | Cheat Sheet

Concepts in Focus

- Deploying the Ecommerce Application Code
- Ecommerce Application-Final Code

1. Deploying the Ecommerce Application Code

Run the below command in your IDE to publish the Ecommerce Application Code.

```
ccbp publish RJSIV4YSTX domain.ccbp.tech
```

Here the **domain** is the domain name to be published.

Quick Tip

To look good in your resume, use your name and **nxttrendz** as the domain name in the domain URL. For example,

```
rahulnxttrendz.ccbp.tech .
```

Warning

An error will be thrown if you are trying to publish with the already existing URL.

Note

A maximum of only 15 characters is allowed in the domain name.

2. Ecommerce Application - Final Code

Run the below command in your IDE to download the final code of an Ecommerce Application.

```
ccbp start RJSIVPP7N7
```
